

DEVANSH MAHANT

AI/ML & Full-Stack Software Engineer

Bangalore, IN | +91 9584775877 | devansh21y@gmail.com | linkedin.com/in/devansh-m12 | github.com/8dazo

SUMMARY

Software engineer with 2+ years shipping AI-integrated products end to end — LLM orchestration, agent tooling, full-stack systems. Built runtime guardrail infrastructure for LLM apps (budget control, tool policy, trace/eval pipelines) and a multi-model AI image platform serving paying users. ACM ICPC Regional Finalist; LeetCode Guardian (top 0.3%).

SKILLS

AI / ML: LLM Orchestration & Agents, Prompt Engineering, LoRA Fine-Tuning, RAG, OpenAI API, Tool/Function Calling, Eval Pipelines

Languages: Python, TypeScript, JavaScript, C++, Rust, Solidity, SQL

Frameworks: Next.js, React.js, Node.js, Express.js, FFmpeg

Data & Cloud: PostgreSQL, MongoDB, Docker, AWS, REST, GraphQL, Git/GitHub

EXPERIENCE

Senior Software Engineer — AI & Full-Stack • Stride.AI

Sep 2025 – Present

- Design and ship LLM-agent workflows end to end — orchestration logic, tool integrations, and the surrounding product surface — cutting manual task execution time by 40% for target user workflows.
- Own technical execution across 20+ platform features spanning AI orchestration and backend services, scaling the API layer to reliably handle 10,000+ requests/day.
- Set architecture and product direction for AI feature delivery, working directly with founders to translate model capability into shipped functionality.

Software Developer • Cloudbloom

Apr 2024 – Aug 2025

Promoted from Software Developer Intern after leading frontend delivery through the internship.

- Built and scaled a full-stack Learning Management System to 1,000+ concurrent active users, owning both API design and core frontend architecture.
- Refactored backend services to cut latency and improve throughput by 20%, resolving 50+ production-level performance and reliability bottlenecks.

Teaching Assistant — Data Structures & Algorithms • GeeksforGeeks

Feb 2024 – Mar 2024

- Mentored 100+ students weekly on DSA and problem-solving strategy, driving a 30% improvement in cohort performance metrics.

Software Developer Intern • Cloudbloom

Jun 2023 – Jan 2024

- Built responsive React.js/CSS3 UI components in collaboration with senior engineers, improving frontend rendering speed.
- Triaged and resolved 30+ defects through the QA cycle, stabilizing the pre-production release pipeline.

PROJECTS

Captar — Runtime Control for LLM Applications — captar.aurat.ai

TypeScript, Next.js, PostgreSQL, OpenAI API

- Built a runtime guardrail layer that wraps the OpenAI client to enforce per-session budget reservations, tool allowlists/blocklists, and execution policy without a proxy — keys stay inside the host application.
- Implemented span-first request tracing with violation capture and dataset export (CSV/JSONL, API ingestion) for downstream eval work.
- Shipped a manual-eval workflow scoring exported traces against weighted rubrics, with regression checks on every dataset change.

Baelys — Multi-Model AI Image Editor — baelys.aurat.ai

Next.js, Node.js, LoRA, Canvas-based Editor

- Built an AI image platform integrating 20+ LoRA-based style-transfer models alongside AI background removal and a canvas-based multi-layer editor.
- Launched on Product Hunt; drove monetization through tiered subscriptions and earned public recognition from Vercel's CEO for the product's technical execution.

EDUCATION

Bachelor of Technology, Computer Engineering — IIIT Dharwad (CGPA: 7.41)

Jul 2024

ACHIEVEMENTS

- ACM ICPC 2023 — Regional Finalist, selected among top competitive programmers nationwide.
- LeetCode Guardian (Top 0.3%, Peak Rating 2,380); Codeforces Expert (Peak Rating 1,653).
